

Better Than Logs Products Now Include Integral Polyiso R-5 Insulation

Here at Better Than Logs, we are always looking for ways to improve our Products. From this desire for constant improvement, Better Than Logs is now incorporating Polyisocyanurate (Polyiso) insulation within the manufacturing process of our proprietary concrete siding products. As a result, our siding boards are now stiffer than ever, still include our internal reinforcement and internal bracing engineered components, and also offer an R-5 insulation value..... All this is now included in all of our standard siding products.

Through incorporating the Polyiso material into our proprietary molding process, we have also reduced the overall weight of our products and the overall stiffness of the board has increased. Due to these improved characteristics, handling and installing our products is now easier than ever. There really is no down side!

Stay tuned to our News page for more exciting announcements regarding our company and our products. We strive to provide the highest possible quality product at a fair price to our customers worldwide!
